FAQs

Dear friend,

Welcome to the first issue of the Site2 eNewsletter! This issue will feature an article from NEPA Medical News describing the need for an offsite backup and recovery solution to comply with HIPAA regulations, and the benefits of offsite backup versus antiquated tape based solutions. You will also find the most recent Site2 company news.

Offsite Backup: A Strategy for Compliance, Security and Cost-Savings

*by Marc Gonzalez
President, Site2*

For organizations adopting electronic medical record systems, the task of doing backup (storing critical patient and operational data) has become increasingly complicated. There will soon be financial pressure to conform to regulatory requirements. And, healthcare practices, like other straining industries, must bear the overhead to equip their facilities and engage IT professionals with the skills to handle security and compliance issues.

Press Release:

Gonzalez and Magdon launch Site2 as the Data Security Industry is Booming.

Formerly DAS, now Site2, this homegrown tech company established a foothold at prestigious 417 Lackawanna Avenue in Scranton in early 2009. The signing of noteworthy client and partnership agreements in and out of the Commonwealth has put this agile firm on solid ground.

Does your sensitive information have the most effective data security solution available?

Try

SOURCEcopy™

for 2 weeks at no cost or obligation and see how easy it is to go beyond compliance.

Did You Know?...

One of the most efficient features of Sourcecopy is that it eliminates the backup of unnecessary data.

The customer administrator is able to define backup sets allowing them to include, exclude, or filter certain files or databases, precisely meeting the customer requirements. Archiving allows for a client to be efficient in what they backup while also keeping information for compliance.
