

Site2 Announces Release of Mobile Backups

Scranton, PA September 22, 2011 – Site2 announced today support for smartphones and tablets with the latest edition of their SourceCopySM Backup & Recovery service. This secure backup service, powered by their Asigra Hybrid partnership, delivers the latest features from version 11 of this industry leading backup platform. Site2 is now able to protect a business' entire digital footprint from data centers (servers) to branch offices (desktops) to mobile endpoints (tablets, smartphones and remote laptops). Having a single platform for all business components means fewer processes, less complexity and less training.

“Site2 is pleased to be at the forefront of the mobility movement” said Marc Gonzalez, head of channel partner development at Site2. “Both consumers and businesses are finding new ways of leveraging tablets and smartphones to improve their business model. As a result, critical customer information is being stored on these devices including insurance, financial and healthcare records.” Mr. Gonzalez added “it is critical for businesses to protect their sensitive customer information with the best security available”. SourceCopy touts the industry's leading security techniques including FIPS Government Certified Encryption.

The latest version is available immediately through the software only service (installed on existing customer computers), smartphone and tablet “apps” (downloadable from iTunes and the Android Market Place), as well as through the SourceCopy appliance (a purpose built backup device, offered through a partnership with Racktop Systems, which facilitates offsite backups as well as local storage capacity ranging from 100 GigaBytes up to 10 TeraBytes's).

Site2 was formed to provide secure data protection and disaster recovery services needed by the rigorous demands of clients. It continues to grow by evolving to meet the market's ever changing computing demands. In addition to the SourceCopySM secure backup and recovery service, Site2 offers application hosting, site recovery servers & workspace, and risk mitigation consulting services.

About Site2 Company:

Site2 (www.site2bc.com), an Asigra Hybrid Partner, is a leading provider of secure cloud based computing services. As an IT service provider, Site2 helps companies to focus on their core competencies by hosting and managing their core business applications from SAS 70 Type II audited datacenters. It specializes in disaster recovery and backup services to industries that require the strictest security and compliance regulations such as HIPAA and FINRA.
